development is the chemical means by which photographic film or paper is treated after photographic exposure to produce a negative or positive image. Photographic processing transforms the latent image into a visible image, makes this permanent and renders it insensitive to light.

## **Photographic processing - Wikipedia**

Long exposure is commonly used in night photography. Double exposure: Double exposure, also called multiple exposure, is a technique where the camera shutter opens twice to expose the film to different images. As a result, the photograph combines the two exposures into a single image, which are laid on top of one another.
